RF-2800/RF-2900 Frequency Counter Circuit

I. Outline:

The RF-2800/RF-2900 displays the frequency of the received broadcast by counting the frequency of the local oscillator and scaling accordingly. Figure 1 is a block diagram for the receiver. The following relationships exist between the reception frequency (f_s), the local oscillator frequency (f_o), the intermediate frequency (f_i) and the display frequency (f_d).

(A) $f_s \pm f_i = f_o \dots (1)$

(B) $f_d = f_s = f_o \pm f_i \dots (2)$

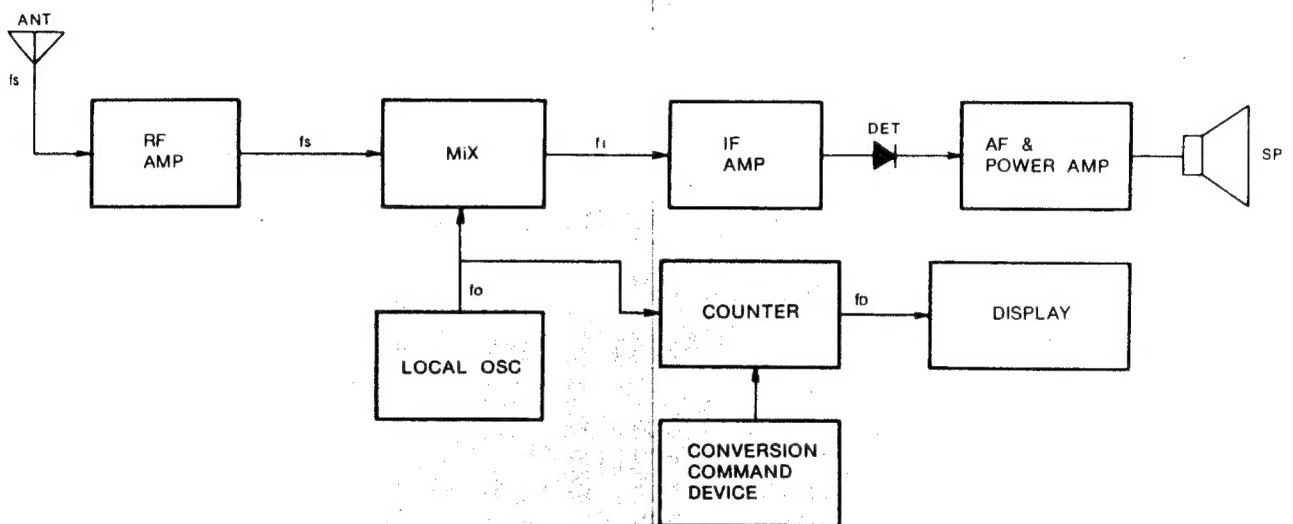

Fig. 1

With reference to figure 1, for example

Reception frequency (f_s) = 10 MHz

Intermediate frequency (f_i) = 455 kHz

Under these conditions, the local oscillator frequency (f_o) must be, according to formula (1), 10.455 MHz (called "upper local oscillation") or 9.545 MHz (called "lower local oscillation"). Thus, if 10.455 MHz is used as the local oscillator signal:

Display frequency (f_d) = 10.455 (f_o) - 0.455 (f_i) = 10 MHz (f_s) (3)

Therefore, the display frequency is equivalent to the reception frequency.

The subtraction of the 0.455 MHz (f_i) is accomplished by the conversion command device to the counter.

If the unit were designed to use the lower local oscillator frequency, a signal (preset frequency = +0.455 MHz) would be applied to the counter in order to add 0.455 MHz.

At the same time, in models which use different frequency, such as 2 MHz, for the intermediate frequency (f_i), a conversion signal is applied to the counter in order to add (or subtract) 2 MHz, so that the reception frequency will be correctly displayed.

In short, the conversion signal must be equal to $\pm f_i$.

II. Block Diagram

Figure 2 is a chart of the reception frequency, local oscillator frequency and intermediate frequency for each band.

Band	Signal Frequency (MHz)	Intermediate Frequency (MHz)	Local Osc. Frequency (MHz)
FM	87.5 ~ 108	10.7	98.2 ~ 118.7
LW	0.150 ~ 0.410	0.455	0.605 ~ 0.865
MW	0.525 ~ 1.610	0.455	0.980 ~ 2.065
SW1	3.2 ~ 8.0	2	5.2 ~ 10.0
SW2	8.0 ~ 16.0	2	10.0 ~ 18.0
SW3	16.0 ~ 30.0	2	18.0 ~ 32.0

Fig. 2

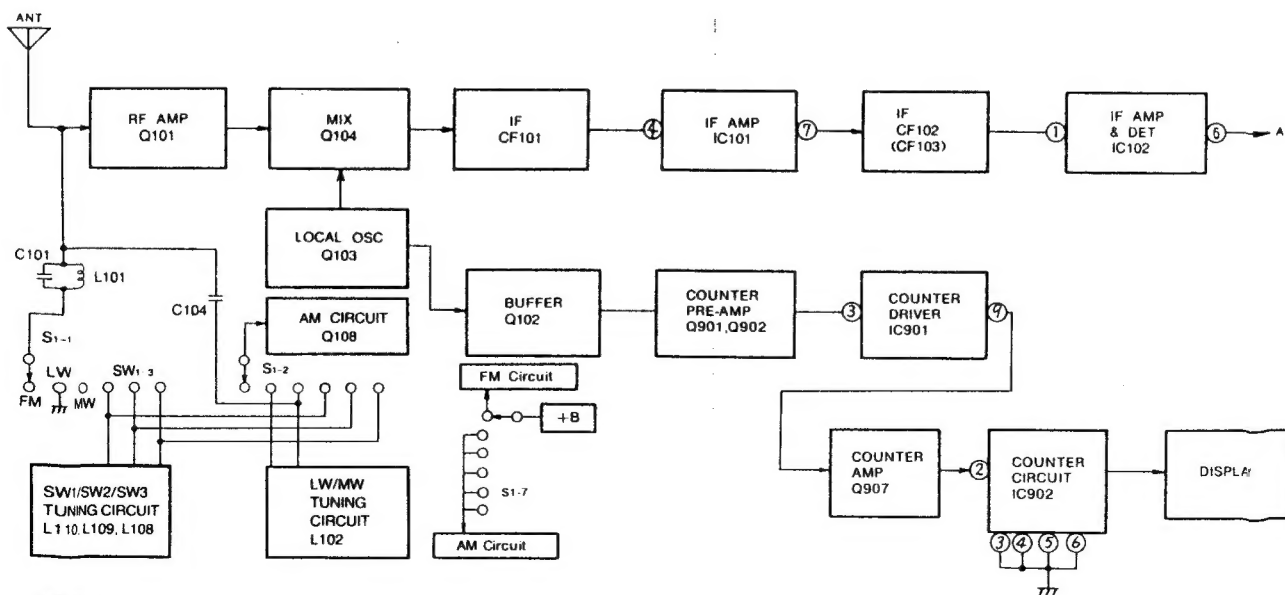

Because, the upper local oscillator frequency is used the conversion signal is subtracted from the counter circuit for each band.

As can be understood from the table in figure 2, an intermediate frequency of 10.7 MHz is used for the FM band. Because the upper local oscillator frequency is used, the reception frequency is displayed after 10.7 MHz has been subtracted from the local oscillator frequency.

For the LW, MW bands, 455 kHz is subtracted from the local oscillator frequency.

For the SW bands, 2 MHz is subtracted from the local oscillator frequency.

Figures 3 and 4 are block diagrams which include the RF, Local Oscillator, IF and Counter circuits. The subtraction is accomplished through logic signals applied to pins 3, 4, 5 and 6 of IC902.

NOTE:

Fig. 3 FM Section Block Diagram

Figure 6 shows the preset selector circuitry.

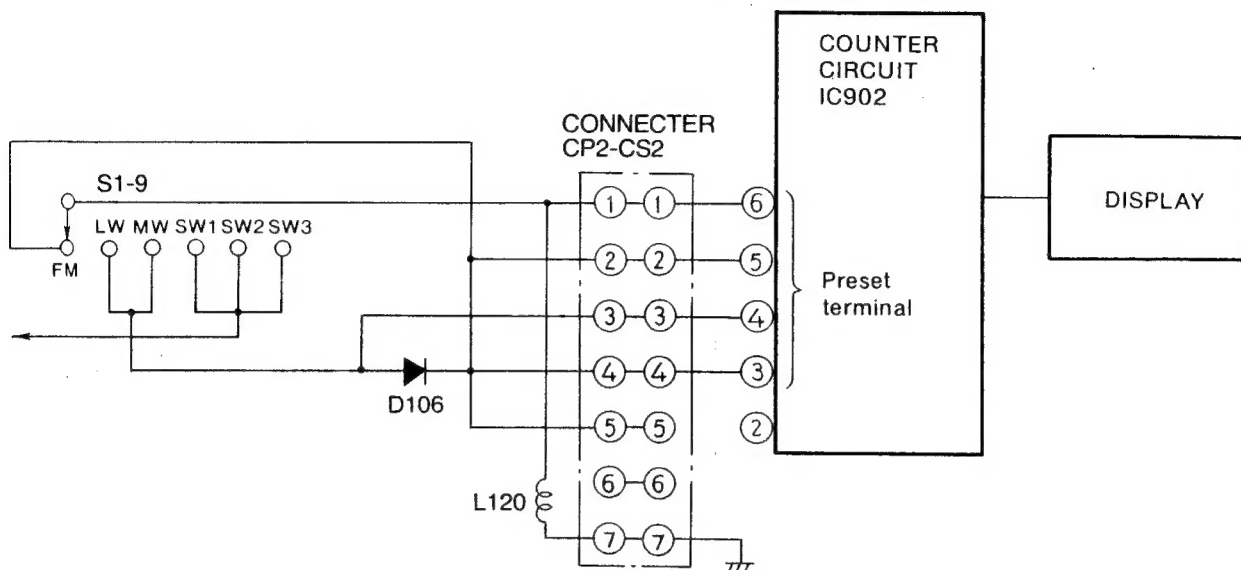

Fig. 6

A. For FM:

- (a) Terminal 6 of IC902 becomes an "L" level. (through connectors Pin 1→L120→Pin 7→GRND)
- (b) Terminal 5 of IC902 becomes an "L" level. (through S1-9→Connector Pin 2.)
- (c) Terminal 4 of IC902 becomes an "L" level. (through S1-9→D106→Connector Pin 3)
- (d) Terminal 3 of IC902 is set at an "L" level. (through S1-9→Connector Pin 4)

As a result, (refer to the table in figure 5) the counter circuit subtracts 10.7 MHz from the local oscillator frequency (the input signal), and the result is displayed as the reception frequency.

- B.** In the same way, for the LW, MW and SW bands the condition of each preset terminal is changed by the band selector (S1-9) consequently, the preset frequency shown in the table in figure 5 is obtained, and the correct reception frequency is displayed.

IV. Counter Signal Circuitry

Figure 7 shows the counter signal circuitry.

- A.** For each band, the local oscillator signal from the local oscillator circuitry is selected (FM, LW, MW or SW) by SW-A, and is supplied to terminal 3 of the driver circuit (IC901).
- B.** This signal is frequency divided (1/8) by IC901, and is output from terminal 8. At the same time, a signal (frequency divided by 1/80) is output from terminal 9.

Fig. 7

- C. These two output signals are selected (by SW-B): the 1/8 frequency divided output (from terminal 8) for the LW, MW band and SW₁~SW₃ bands, and the 1/80 frequency divided output (from terminal 9) for the FM band are applied to the input terminal (terminal 2) of the counter circuit (IC902).
- D. These frequencies are converted, by IC902, into the original local oscillator frequencies. Moreover, depending upon the signal applied to the preset terminals, the necessary frequency for each band is subtracted from the derived local oscillator frequencies and the resulting frequency is supplied to the display.

V. Signal Selector Circuitry

Figure 8 shows the signal selector circuitry for the counter.

- A. For the FM band, since the band selector (S₁₋₉) is in the "FM" position, the base of each transistor (Q904, Q905 and Q906) becomes an "L" level, consequently, Q904 and Q905 turn on, and Q906 turns off. As a result, the signal from the FM band local oscillator flows as shown below, and is counted at the counter circuitry.

FM Local osc → C902 → Q901 → Q902 → C908 → IC901(3) → IC901(9) → C914 → Q907 → IC902(2)

In this case instance, the local oscillator circuitry for the LW, MW and SW bands does not function (refer to figures 3, 4 and the +B selector).

The signal (AM) from the 1/8 frequency divider is output from terminal 8 of IC901.

However, because Q905 is turned on thus shorting its collector to emitter junction, the base to emitter junction of Q908 is also shorted, therefore, the signal current can not flow to the counter circuit.

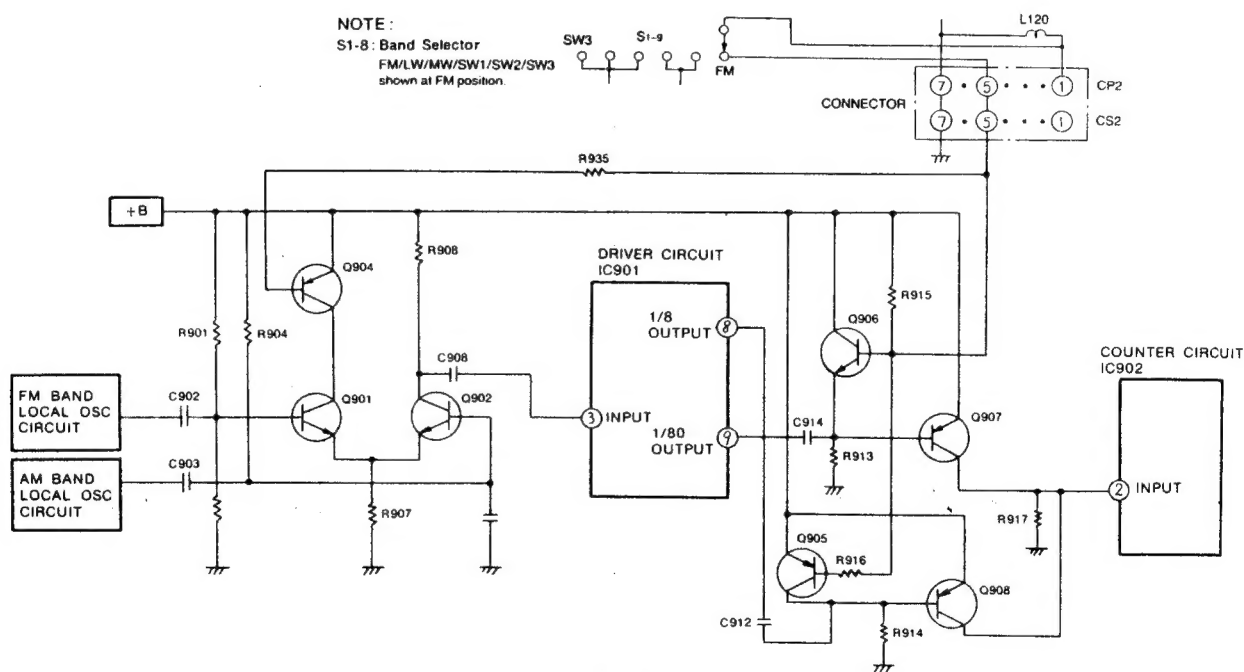

Fig. 8

- B. For the LW, MW and SW₁~SW₃ bands, S₁₋₉ is open, the base (Q904, Q905 and Q906) become an "H" level, consequently Q904 and Q905 turn off, and Q906 turns on. As a result, transistor Q907 turns off (base to emitter junction shorted by Q906) which results in Q901 turning off. Therefore, the signal from the AM local oscillator circuit flows as shown below, and is supplied to the counter circuitry (IC902).

AM local osc → C903 → Q902 → C908 → IC901(3) → IC901(8) → C912 → Q908 → IC902(2)

In this case, the local oscillator circuitry for the FM band does not function.

The above is a description of the operation of the frequency counter circuitry for models RF-2800/RF-2900. The frequency counter circuitry for other models is similar. Refer to RF-4900 Technical Information (Order No. RD8002-T1028), because the counter circuitry for models RF-2800/RF-2900 uses the same LSI as model RF-4900.

■ TO REMOVE CABINET COVER

1. Remove the battery cover.
2. Remove the six (6) screws (nos. 1~6) for the cabinet cover, as shown in fig. 1.
3. Remove the cabinet cover.
4. Pull out sockets from PC board.
5. To reassemble, reverse the above procedure.

■ TO REMOVE PC BOARD (IF, RF Circuit)

1. Remove the cabinet cover. (Refer to cabinet cover removal instruction.)
2. Remove the band knob. (To remove the knob, wind a cord around the control and pull it outward.)
3. Turn the tuning knob fully counter-clockwise.
4. Pull out the sockets from PC board.
5. Unsolder lead from PC board.
6. Remove the eight (8) screws (nos. 1~8) for the PC board, as shown in fig. 2.
7. Remove the PC board.
8. To reassemble, reverse the above procedure and note the followings.

Notes

1. Turn the tuning knob fully counter-clockwise.
2. Turn the tuning capacitor shaft fully counter-clockwise.

■ TO REMOVE FREQUENCY COUNTER

1. Remove the PC board (IF, RF circuit). (Refer to PC board removal instruction.)
2. Remove the two (2) screws (nos. 1 & 2) for the frequency counter, as shown in fig. 3.
3. Remove the frequency counter.
4. To reassemble, reverse the above procedure.

■ TO REMOVE PC BOARD (Frequency Counter)

1. Remove the frequency counter. (Refer to frequency counter removal instruction.)
2. Remove the four (4) screws (nos. 1~4) for the frequency counter cover, as shown in fig. 4.
3. Remove the two (2) screws (nos. 1 & 2) for the PC board, as shown in fig. 5.
4. Remove the PC board.
5. To reassemble, reverse the above procedure.

■ TO REMOVE DIAL SCALE CHASSIS

1. Remove the PC board (IF, RF circuit). (Refer to PC board removal instruction.)
2. Remove the tuning knob.
3. Remove the six (6) screws (nos. 3~8) for the dial scale chassis, as shown in fig. 3.
4. Remove the dial scale chassis.

■ TO REMOVE DIAL MECHANISM

1. Remove the dial scale chassis. (Refer to dial scale removal instruction.)
2. Remove the dial belt, as shown in fig. 7.
3. Remove the two (2) screws (nos. 1 & 2) for the dial mechanism, as shown in fig. 6.
4. To reassemble, reverse the above procedure and note the followings.

Notes

1. Turn the tuning shaft fully counter-clockwise.
2. Set the dial scale at the position, as shown in fig. 7.
3. Attach the dial belt.
4. Refer to dial scale removal instruction.

■ TO REMOVE DIAL SCALE

1. Remove the dial scale chassis. (Refer to the dial scale chassis removal instruction.)
2. Remove the one (1) screw for the dial scale spring, as shown in fig. 7.
3. Remove the dial scale.
4. To reassemble, reverse the above procedure and note the followings.

Notes:

1. Loosen the two (2) screws (nos. 1 & 2) for the dial scale gear, as shown in fig. 8.
2. Set the catch of dial scale gear to the start point of dial scale, as shown in fig. 9.
3. Turn the tuning shaft fully counter-clockwise.
4. After mounting the PC board (IF, RF circuit), turn the dial scale by pushing the catch of dial scale and set the start point of dial scale to the catch of cabinet, as shown in fig. 10.
5. Tighten the two (2) screws (nos. 1 & 2) for the dial scale gear, as shown in fig. 10.

■ TO REMOVE PC BOARD (AF Circuit)

1. Remove the dial scale chassis. (Refer to the dial scale chassis removal instruction.)
2. Remove the six (6) knobs for the RADIO, LIGHT, BAND WIDTH, VOLUME, BASS and TREBLE.
3. Remove the five (5) screws (nos. 2, 3, 5, 6 & 7) for the PC board, as shown in fig. 11.
4. Unsolder lead from PC board.
5. Pull out sockets from PC board.
6. Remove the PC board.
7. To reassemble, reverse the above procedure.

■ TO REMOVE PC BOARD (Control Circuit)

1. Remove the dial scale chassis. (Refer to the dial scale chassis removal instruction.)
2. Remove the three (3) knobs for the SW CAL, RF GAIN and PITCH. (To remove those control knobs wind a cord around the control and pull it outward.)
3. Remove the two (2) screws (nos. 1 & 4) for the PC board.
4. Remove the PC board.
5. To reassemble, reverse the above procedure.

■ TO REMOVE INDICATOR

1. Remove the PC board (AF circuit). (Refer to PC board removal instruction.)
2. Unsolder the terminal of indicator, as shown in fig. 12.
3. Remove the Indicator.
4. To reassemble, reverse the above procedure.

■ HOW TO REPLACE CHIP

1. Remove solder for chip completely.
2. Remove chip by nippers, as shown in fig. 13.
3. Use tube for service parts as shown in fig. 14 and solder service parts according to following table. (please refer to Circuit Board Wiring View for the value of resistor and capacitor).

■ ALIGNMENT INSTRUCTION

READ CAREFULLY BEFORE ATTEMPTING ALIGNMENT

1. Set volume control to maximum.
2. Radio ON/OFF switch to ON.
3. Set bass and treble control to maximum.
4. Set band switch to MW, LW, SW or FM.
5. Set digital display switch to OFF position.
6. Set RF gain control to high.
7. Light switch to OFF position.
8. Set FM AFC/Band width switch to narrow, OFF position for the AM-IF, BFO, and FM adjustment, and to wide ON position for other adjustment.
9. Set pitch control to center.
10. Set BFO switch to ON position for BFO adjustment, and to OFF position for other adjustment.
11. Set SW Cal control to center.
12. Set power source voltage to 9V DC.
13. Output of signal generator should be no higher than necessary to obtain an output reading.

REPLACEMENT PARTS LIST..... Model RF-2800LBS (RD7803-1549)

- NOTES: 1. Part numbers are indicated on most mechanical parts.
Please use this part number for parts orders.
2. X - Z rank: X rank parts will cover 80% of repair needs.
X + Y rank parts will cover 95% of repair needs.
Z rank parts are less necessary.
3. Components identified by shaded area have special characteristic important for safety.
When replacing any of these components use only manufacturer's specified parts.
4. Part numbers shown in bold letters are service standard parts and may differ from production parts.
5. The O mark is used by the manufacturing plant only.
